

FreezeFlow™ Carpet Cleaning Hose Line Freeze Protection for Truckmount Equipment

Freeze protection can be added to the supply and return hose lines for truckmount carpet cleaning equipment.

Basic protection can be added with a single layer of the orange colored rubber coated FreezeFlow™ insulation sleeve.

Enhanced protection can be achieved by first using a base layer of white colored knitted sleeve and then adding the FreezeFlow™ over the base sleeve.

For particularly extreme conditions, the sleeves can be multi-layered - multiple base sleeves and multiple FreezeFlow™ sleeves.

These sleeves and jackets will not prevent freezing - but will delay freezing. With no fluid flow in the hoses and lines, freezing will occur if the hoses and lines are left in below freezing conditions long enough. With fluid flow through the lines, the cooling of the liquid temperature is slowed to the point where freezing is prevented while the equipment is in use.

Heat tracer wiring can be added underneath the sleeving in order to allow the hose/line to be truly freeze protected for extended periods of time with fluid in the lines and no flow.

FreezeFlow™ sleeve is flexible to -76°C. All Sleeve Dimensions are Inside Diameter; Measure your hose line's Outside Diameter to calculate what sleeves to use. Need Help? Call our technical support line at 888-365-2038
